Project Assumptions and Constraints

Assumptions

The major assumptions for the project are below:

- Current Longhorn Bank IT team has working knowledge of legacy systems
- Management has outlined the specific requirements for their mobile and dashboard development
- Each business unit is aware of the internal application change
- Business units will be available to meet with project team, but must be given an advanced notice to not disrupt normal business tasks
- TAT will be decreased
- Additional infrastructure only needed for mobile and dashboard development since UI and single sign-on have available infrastructure
- Stakeholders fully support project
- Project team will be notified of any new internal applications being developed during transition period

Constraints

The important constraints to keep in mind are below:

- **Consistency:**
    - All current internal systems must have the same UI and same single sign-on. This login has to be the same for accessing their email

- **Prototype:**
    - A prototype must be delivered to stakeholders to gather feedback before final development and implementation

- **Cost:**
    - The project must be kept within the given budget of $120,000. Additional financial support will not be provided by stakeholders.

- **Time:**
    - The project must be completed within 7 months. Current timeline projects 6 months so that there is buffer room for unexpected problems that arise.
